

Why he is so insensitive to fire?

Why they block it? What's there? Except for a helicopter, who could have taken this picture from such a view?

What is it? Why? What's behind?

Why the former Argentina congressman was so sensitive to fire?

Please Support Righteousness

It is common knowledge that people can not tolerate the intense pain when fire comes in contact with human skin. Why is it, then, that this person can set himself on fire and remain completely motionless? Is he really a Falun practitioner or is it a staged event orchestrated by the Chinese government to mislead the people about the Falun practice? (Remember the movie "Wag the Dog"?). If Falun practitioners were really immune to pain, then why would 191 Falun practitioners die painfully from inhumane torture, and several thousands more severely injured, by the Chinese government while in jail without being sentenced.

What the Chinese government doesn't want you to know is that Falun Gong is a meditation exercise based on the universal principle of "Truth, Compassion, and Tolerance". It is a practice that, in a short period of time, has won acclaim and been adopted by over 100 million people across more than 30 countries worldwide. Despite the inhumane, bloody persecution from the Chinese government, Falun practitioners continue to use their benevolent heart, peaceful action, blood, body, and even their lives, in order to deliver this message to the entire world:

Falun Gong is Righteous! For the sake of the entire human race, please help eradicate the evil!
